EDUCATION

University of North Carolina at Chapel Hill Ph.D. in Economics Committee: Donna Gilleskie (chair), Luca Flabbi, Désiré Kédagni, Klara Peter, Sean Sylvia	2022 - 2027 (expected)
University of Wisconsin, Madison M.S. in Economics	2021 - 2022
Xi'an Jiaotong University B.A. in Economics	2017 - 2021

FIELDS OF INTEREST

Labor Economics, Development Economics, Energy and Environment Economics

RESEARCH

Job market paper

Unburdened Fields, Mobilized Workers: Labor Market Responses to Agricultural Tax Reform and Intergenerational Consequences

In many developing economies, the coexistence of low productivity agriculture and surplus labor in farming reflects a fundamental sectoral misallocation that slows structural transformation and limits long run growth. This paper studies how the agricultural tax reform in China between 2000 and 2006 reshaped this distorted equilibrium. First, by employing a staggered difference-in-differences (DID) design, I document a large and immediate financial benefits from tax reform on rural families. I argue that rural households responded by investing heavily in agricultural machinery, which substituted for manual labor and reduced labor input in farm sectors. These adjustments facilitated labor reallocation into higher-productivity non-farm employment. Second, I employ a cohort DID specification to study intergenerational impacts. I show the exposure to tax reform at school ages significantly raised the educational attainments of teenagers and generated more long-run benefits in their adulthood, suggesting a persistent gain in human capital accumulation and labor allocation adjustment. Finally, I show these micro-level changes are different between genders and are concentrated on females and girls. The results highlight how fiscal reforms that relax production constraints can trigger technology adoption, mitigate labor misallocation, and generate persistent improvements in human capital formation.
